Table 1 caption blah blah blah blah.....

2 **Ontology Reasoning**

2.1

Lipid(s): LMFA01010053

Current classification: Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Straight chain fatty acids [FA0101]

Suggested classification: Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Branched fatty acids [FA0102]

Discussion: This lipid exhibits two branching events characteristic of lipids in the “Branched fatty acids” subclass.

Representative lipids from current subclass:	Representative lipids from suggested subclass:
LMFA01010001	LMFA01020001
LMFA01010002	LMFA01020002
LMFA01010003	LMFA01020003
LMFA01010004	LMFA01020004

2.2

Lipid(s): LMFA01020363, LMFA01020364

Current classification: Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Branched fatty acids [FA0102]

Suggested classification: Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Unsaturated fatty acids [FA0103]

Discussion: These lipids have unsaturated bonds characteristic of lipids in the “Unsaturated fatty acids” subclass, but do not exhibit branching.

Representative lipids from current subclass:	Representative lipids from suggested subclass:
LMFA01020001	LMFA01030001
<p>Chemical structure of LMFA01020001: A branched fatty acid with a double bond and a carboxylic acid group.</p>	<p>Chemical structure of LMFA01030001: A long-chain fatty acid with multiple double bonds and a carboxylic acid group.</p>
LMFA01020002	LMFA01030002
<p>Chemical structure of LMFA01020002: A branched fatty acid with a double bond and a carboxylic acid group.</p>	<p>Chemical structure of LMFA01030002: A long-chain fatty acid with a double bond and a carboxylic acid group.</p>
LMFA01020003	LMFA01030004
<p>Chemical structure of LMFA01020003: A branched fatty acid with a double bond and a carboxylic acid group.</p>	<p>Chemical structure of LMFA01030004: A short-chain fatty acid with a double bond and a carboxylic acid group.</p>
LMFA01020004	LMFA01030005
<p>Chemical structure of LMFA01020004: A branched fatty acid with a double bond and a carboxylic acid group.</p>	<p>Chemical structure of LMFA01030005: A short-chain fatty acid with a double bond and a carboxylic acid group.</p>

2.3

Lipid(s):	LMFA01030188, LMFA01030189, LMFA01030191
Current classification:	Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Unsaturated fatty acids [FA0103]
Suggested classification:	Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Carbocyclic fatty acids [FA0114]
Discussion:	These lipids have only have unsaturated bonds in a carbocyclic ring characteristic of some lipids in the “Carbocyclic fatty acids” subclass.

Representative lipids from current subclass:	Representative lipids from suggested subclass:
LMFA01030001	LMFA01140025
LMFA01030002	LMFA01140028
LMFA01030004	LMFA01140018
LMFA01030005	LMFA01140023

2.4

Lipid(s): LMFA01020274, LMFA01020276

Current classification: Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Branched fatty acids [FA0102]

Suggested classification: Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Oxo fatty acids [FA0106]

Discussion: These lipids exhibit an additional carbonyl group characteristic of lipids in the “Oxo fatty acids” subclass.

Representative lipids from current subclass:	Representative lipids from suggested subclass:
LMFA01020001	LMFA01060002
LMFA01020002	LMFA01060111
LMFA01020003	LMFA01060157
LMFA01020004	LMFA01060178

Lipid(s): LMFA01030579

Current classification: Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Unsaturated fatty acids [FA0103]

Suggested classification: Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Oxo fatty acids [FA0106]

Discussion: This lipid exhibits an additional carbonyl group characteristic of lipids in the “Oxo fatty acids” subclass.

Representative lipids from current subclass:	Representative lipids from suggested subclass:
LMFA01030006	LMFA01060148
LMFA01030023	LMFA01060111
LMFA01030043	LMFA01060093
LMFA01030048	LMFA01060095

2.6

Lipid(s): LMFA01030675, LMFA01030676

Current classification: Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Unsaturated fatty acids [FA0103]

Suggested classification: Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Halogenated fatty acids [FA0109]

Discussion: These lipids are halogenated which is a characteristic of lipids in the “Halogenated fatty acids” subclass.

Representative lipids from current subclass:	Representative lipids from suggested subclass:
LMFA01030006	LMFA01090031
LMFA01030023	LMFA01090073
LMFA01030043	LMFA01090088
LMFA01030048	LMFA01090100

Lipid(s): LMFA01030714

Current classification: Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Unsaturated fatty acids [FA0103]

Suggested classification: Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Hydroxy fatty acids [FA0105]

Discussion: This lipid has a hydroxy group characteristic of lipids in the “Hydroxy fatty acids” subclass.

Representative lipids from current subclass:	Representative lipids from suggested subclass:
LMFA01030006	LMFA01050232
LMFA01030023	LMFA01050258
LMFA01030043	LMFA01050272
LMFA01030048	LMFA01050324

Lipid(s): LMFA01030717

Current classification: Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Unsaturated fatty acids [FA0103]

Suggested classification: Fatty Acyls [FA] > Eicosanoids [FA03] > Hydroxy/hydroperoxyeicosapentaenoic acids [FA0307]

Discussion: This lipid has a hydroxy group as well as five double bonds and 20 carbons, all characteristics of lipids in the “Hydroxy/hydroperoxyeicosatetraenoic acids” subclass.

Representative lipids from current subclass:	Representative lipids from suggested subclass:
LMFA01030006	LMFA03070031
LMFA01030023	LMFA03070028
LMFA01030043	LMFA03070041
LMFA01030048	LMFA03070049

Lipid(s): LMFA01030719

Current classification: Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Unsaturated fatty acids [FA0103]

Suggested classification: Fatty Acyls [FA] > Eicosanoids [FA03] > Hydroxy/hydroperoxyeicosatetraenoic acids [FA0306]

Discussion: This lipid has a hydroxy group as well as four double bonds and 20 carbons, all characteristics of lipids in the “Hydroxy/hydroperoxyeicosatetraenoic acids” subclass.

Representative lipids from current subclass:	Representative lipids from suggested subclass:
LMFA01030006	LMFA03060030
LMFA01030023	LMFA03060012
LMFA01030043	LMFA03060018
LMFA01030048	LMFA03060044

2.10

Lipid(s):	LMFA01030750, LMFA01030790, LMFA01030792, LMFA01030796, LMFA01030797, LMFA01030798, LMFA01030799, LMFA01030893, LMFA01030895, LMFA01030905
Current classification:	Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Unsaturated fatty acids [FA0103]
Suggested classification:	Fatty Acyls [FA] > Fatty Acids and Conjugates [FA01] > Branched fatty acids [FA0102]
Discussion:	These lipids exhibit branching events characteristic of lipids in the “Branched fatty acids” subclass. Examination of lipids classified by LIPID MAPS shows branching takes precedence over unsaturation.

Representative lipids from current subclass:	Representative lipids from suggested subclass:
LMFA01030006	LMFA01020103
LMFA01030023	LMFA01020207
LMFA01030043	LMFA01020045
LMFA01030048	LMFA01020209

2.11

Lipid(s):	LMGP01030016
Current classification:	Glycerophospholipids [GP] > Glycerophosphocholines [GP01] > 1-(1Z-alkenyl),2-acylglycerophosphocholines [GP0103]
Suggested classification:	Glycerophospholipids [GP] > Glycerophosphoethanolamines [GP02] > Diacylglycerophosphoethanolamines [GP0201]
Discussion:	The structure consists of two fatty acyls joined to the glycerol backbone at the 1 and 2 positions. Thus, it is inaccurate to describe it as a alkenyl containing group. The right classification is the diacylglycero-phosphocholine.

Representative lipids from current subclass:	Representative lipids from suggested subclass:
LMGP01030004	LMGP02010003
LMGP01030006	LMGP02010004
LMGP01030008	LMGP02010005
LMGP01030009	LMGP02010008

2.12

Lipid(s): LMGP04040006

Current classification: Glycerophospholipids [GP] > Glycerophosphoglycerols [GP04] > Dialkylglycerophosphoglycerols [GP0404]

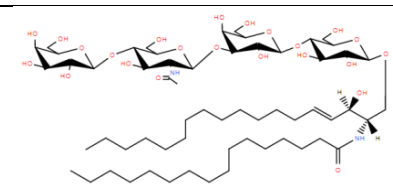

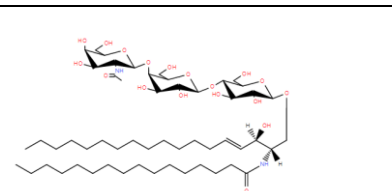

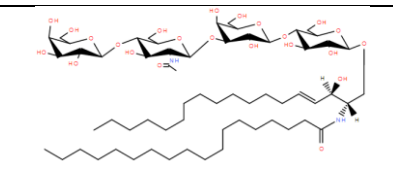

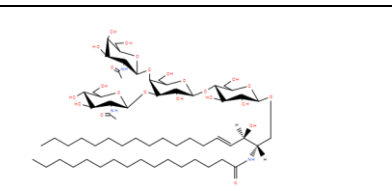

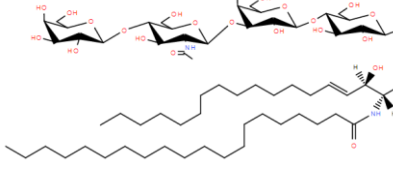

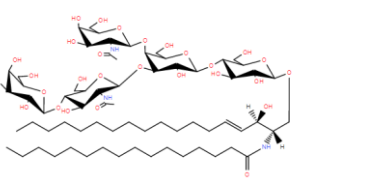

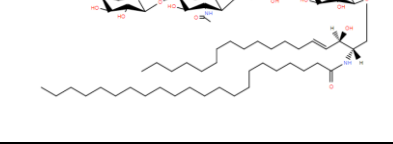

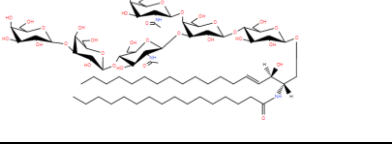

Suggested classification: Glycerophospholipids [GP] > Glycerophosphoglycerols [GP04] > 1-acyl,2-alkylglycerophosphoglycerols [GP0411]

Discussion: This lipid has an ester group characteristic of lipids in the “1-acyl,2-alkylglycerophosphoglycerols” subclass.

Representative lipids from current subclass:	Representative lipids from suggested subclass:
<p>LMGP04040002</p>	<p>LMGP04110001</p>
<p>LMGP04040003</p>	<p>LMGP04110002</p>
<p>LMGP04040004</p>	<p>LMGP04110003</p>
<p>LMGP04040005</p>	<p>LMGP04110004</p>

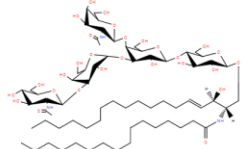

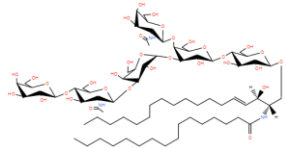

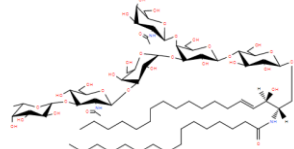

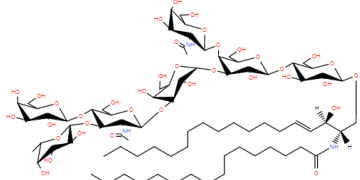

Lipid(s): LMSP0505DO01,
Current classification: Sphingolipids [SP] > Neutral glycosphingolipids [SP05] > Galβ1-4GlcNAcβ1-3Galβ1-4Glc- (Neolacto series) [SP0505]
Suggested classification: Sphingolipids [SP] > Neutral glycosphingolipids [SP05] > GalNAcβ1-4Galβ1-4Glc- (Ganglio series) [SP0503]
Discussion: The sugar chain starting from Ceramide fits the Ganglio series root exactly (GalNAc-Gal-Glc-Cer.). Discussion continued on the next page.

Representative lipids from current subclass:	Representative lipids from suggested subclass:
LMSP0505AA01	LMSP0503AA01
	
LMSP0505AA02	LMSP0503AN01
	
LMSP0505AA03	LMSP0503AO01
	
LMSP0505AA04	LMSP0503AP01
	

2.14

-Continued Discussion of Lipids similar to LMSP0505DO01-08

Lipid(s):	LMSP0505DP01-LMSP0505DP08, LMSP0505DQ01-LMSP0505DQ08, LMSP0505DR01-LMSP0505DR08, LMSP0505DS01-LMSP0505DS08 (1-8 in each sub-sub section because only the Ceramide chain changes)
Current classification:	Sphingolipids [SP] > Neutral glycosphingolipids [SP05] > Galβ1-4GlcNAcβ1-3Galβ1-4Glc- (Neolacto series) [SP0505]
Suggested classification:	Sphingolipids [SP] > Neutral glycosphingolipids [SP05] > GalNAcβ1-4Galβ1-4Glc- (Ganglio series) [SP0503]
Discussion:	The structure is branched but the structure fits one root better than the other and based on the 1997 IUPAC guidelines for naming glycolipids and the LIPID MAPS own grouping rules, the root structure determines the group.

Representative lipids from current subclass:	Representative lipids from suggested subclass:
LMSP0505DP01	LMSP0503 Ganglio series
	<p>Each of the sub-sub groups after DO from DP-DS are the exact same as DO sub-sub group's structure, but with the addition of one sugar to the side chain for each new group. This allows them to be grouped as part of the Ganglio series as well. Also none of these glycolipids have the neolacto series root.</p>
LMSP0505DQ01	
	
LMSP0505DR01	
	
LMSP0505DS01	
	

Lipid(s):
LMSP0505DA01-LMSP0505DA08, LMSP0505DB01-LMSP0505DB08,
LMSP0505DJ01-LMSP0505DJ08, LMSP0505DK01-LMSP0505DK08,
LMSP0505DL01-LMSP0505DL08 (1-8 in each sub-sub section because only the
Ceramide chain changes)

Current classification:
Sphingolipids [SP] > Neutral glycosphingolipids [SP05] > Galβ1-4GlcNAcβ1-
3Galβ1-4Glc- (Neolacto series) [SP0505]

Suggested classification:
Sphingolipids [SP] > Neutral glycosphingolipids [SP05] > GalNAcβ1-3Galα1-
3Galβ1-4Glc- (Isoglobo series) [SP0506]

Discussion:
Based on the 1997 IUPAC guidelines for naming glycolipids and the sub-sub
groupings of LIPID MAPS themselves, these lipids fit the glyco-root of the
Isoglobo series because these lipids don’t have an N-acetyl-glucosamine in the
third position from the Ceramide and have all the correct linkage for the Isoglobo
series.

Representative lipids from current subclass:	Representative lipids from suggested subclass:
LMSP0505AA01	LMSP0506AD01
LMSP0505 (Neolacto series)	LMSP0506 (Isoglobo series)
Galβ1-4GlcNAcβ1-3Galβ1-4Glc-Cer	GalNAcβ1-3Galα1-3Galβ1-4Glc-Cer

3 New Ontology

3.1 Table 2 – table title???

Current Ontology	New Suggested Ontology:	Root of New Suggested Ontology
LMSP0505DC01-08 LMSP0505DD01-08 LMSP0505DE01-08 LMSP0505DF01-08	LMSP0510 (gluco-globo series) [10]	GlcNAc β 1-3Gal α 1-3Gal β 1-4Glc β -Cer
LMSP0505DM01-08 LMSP0505DN01-08	LMSP0511 (galacto-lacto series) [11]	Gal α 1-3Gal α 1-3Gal β 1-4Glc β -Cer

The table shows the lipids that would fit more appropriately in a new subclass of lipids. The new subclass LMSP0510 (gluco-globo) is suggested for the LMSP0505DC-DF lipids because the root of these lipids is similar to the isoglobo series and contains a terminal N-acetyl glucosamine. NAME AND REASONING FOR GALACTO-LACTO... The roots of the new suggested ontologies are shown to illustrate that these lipids do not fit well with the root of the current classification, LMSP0505, Gal β 1-4GlcNAc β 1-3Gal β 1-4Glc-Cer.
